Name, Full Address, & Phone Number 3rd Contact Person (of individual not living w/ customer)

The Tom Green County Fresh Water District #3 a M.U.D. (to be known hereafter as the Utility) agrees to service the property listed above in the name of the Customer who agrees to purchase and receive water from the Utility in accordance with the Rules and Regulations of the Utility as included in its approved Rate Tariff on file with the Utility.

All water will be measured by meters, which are furnished, installed, owned, and maintained by the Utility. The meter and/or connection are for the sole use of the Customer to serve water to one dwelling or property. The Customer shall not share, resell, or submeter water to any other dwelling, business, property etc....without specific written authorization of the Utility and in compliance with applicable laws and regulations.

The Utility has the right to locate a water service meter and the pipe necessary to connect the meter on the property of the Customer at a point set by the Utility. The Customer must accept the meter point where the tap has been made if already present. The Customer will allow the Utility, during regular business hours, access at all reasonable times to its property and equipment located upon Customer's premises for the limited purposes of reading the water meter, repairing or replacing existing facilities, and the inspection of Customer's facilities to check for illegal connections, unsafe plumbing

practices, or cross-connections, in compliance with Chapter 290 – Regulations of the TCEQ. The Customer will notify the Utility, for inspection, before covering up any plumbing changes or modifications that might cause the Utility to be tied to any other water source. If the Utility notifies a Customer, in writing, of any cross-connection or potential contamination hazard; the Customer shall immediately remove or adequately isolate any cross-connection or potential contamination hazards. If a Customer chooses to isolate potential hazard, the Customer shall, at their own expense, properly install, test, and maintain a back-flow prevention device required by the Utility. Copies of all required testing and maintenance records shall be provided to the Utility for TCEQ review. If the Customer fails to comply with terms of the Service Agreement, the Utility may terminate service in accordance with the Chapter 291 TCEQ Rules. If the Customer violates the Restrictions or if there are potential cross connections or other potential contaminations hazards that the Customer refuse to immediately remove or adequately isolate, the Utility may terminate service or install, test, and maintain a back flow prevention device at the service connection. All and any costs with the installation, testing, and maintenance of a back flow device must be paid by the Customer.

The Restrictions are as follows; these are unacceptable practices as prohibited by the Utility and Chapter 290, TECQ Regulations. 1.) No direct connection between the public drinking water supply and a potential source of contamination is permitted. Potential sources of contamination shall be isolated from the public water system by air-gap or an appropriate back-flow prevention device. 2.) No cross connection between the public drinking water supply and a private water system is permitted. These potential threats to the public drinking water supply shall be eliminated at the service connection of an air-gap or a reduced pressure-zone back flow prevention device. 3.) No connection which allows water to be returned to the public drinking water supply, is permitted.

Prohibition of Multiple Connections

To A Single Tap. No more than one (1) residential or commercial, service connection is allowed per meter. Any unauthorized submetering or diversion of service shall be considered a multiple connection and subject to disconnection of service. If the District has sufficient reason to believe a multiple connection exists, the District shall discontinue service under the disconnection without notice provisions of this service policy.

The Customer will install or can have the District install, at Customer's expense, a cut-off valve within 5 feet of the meter on the Customer's side. The Customer will install, at Customer's own expense, a service line from the water meter to the point of use. The Customer will be responsible for maintenance and repair of the service line. The Customer shall hold the Utility harmless from any and all claims or demands for damage to real or personal property occurring from the point the Customer ties on to the water meter to the final destination of the line installed by the Customer.

The Customer agrees to grant the Utility an easement / right-of-way for the purpose of installing, maintaining and operating such pipe lines, meter, valves, and any other equipment which may be deemed necessary for the provision of the Utility service to that Customer. The Utility will attempt to restore the Customer's property to its original condition after installation or repairs. This easement may be in such form as a required by the Utility. The Customer agrees not to interfere with the Utility's employees in the discharge of their duties. The Customer will not permit anyone except the Utility's employees to tamper with or interfere with any of the equipment installed on the Customer's premises.

The Customer has been given a copy of the Utility's Board Approved Rate Tariff and agrees to pay the rates in the tariff and abide by the requirements in this application.

(Customer's Signature)

(Date)

Service to be connected at the service location on or about _____, but in no case later than 14 days from the date of this application is accepted by the Utility representative. If service is to be connected later than 14 days the Customer must be notified as soon as possible.
